Art Unit: 1636

Applicant's election without traverse of Group I, claims 10-22, 33, 40 and 41, in the reply filed on 30 June 2005 is acknowledged. Claims 34-39 and 42 stand withdrawn from further consideration pursuant to 37 CFR 1. 142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made without traverse in the reply filed on 30 June 2005.

Claim 33 is allowed.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 10-14 and 16-22 stand, and newly amended claim 15 and newly added claims 43 and 44 (thus "10-22, 43 and 44") are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim 15 has been amended such that it now lacks adequate written description for the reasons of record, and must now be included in the present rejection.

At page 12 of the amendment filed 21 April 2006, Applicants argue that 5 mutants have been presented in the specification, and that constitutes a representative sample of structural

variations of the core+1 protein. It is pointed out that each of the variants is expressed and detected in the recited Western analysis. However, it is noted that the variants actually fall into only two very small regions (1 and 4 nucleotides long), which are relatively proximal, leaving the vast remainder of the protein primary structure untested and thus untaught with respect to the effect of variation. Furthermore, three of the five mutants showed some reduction in the expression of core-related 30 kD protein. Thus, the sample is really only two variants, which are possibly not particularly distinct, and the effects of which are somewhat indistinct, i.e., a partial reduction in expression levels for unclear reasons. Such does not constitute a representative sampling of protein variants. And, of course, it is not clear what elements of the structure of the protein are significant for antibody recognition, i.e., epitopes. Without knowing this, one of ordinary skill in the art would not have recognized that Applicants were in possession of the full scope of the claimed invention.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 1636

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
